

Sewer Main Relining

Project Description:	Rehabilitation of sewer mains
Reasons for Project:	The purpose of this project is to provide ongoing rehabilitation of sewer pipes by relining them. There are sections within the sewer network which are deteriorated. The rate of infiltration during wet weather is exacerbated by the deteriorated sections which can cause surcharges at manholes and pump station during extended wet weather.
Benefits of Project:	Relining restores the integrity, prevents collapse or ingress of tree roots and reduces infiltration during wet weather.
Estimated Total Cost:	\$300,000
Commencement Date:	February 2020
Duration of Project:	Five (5) months
Contact Officer:	Scott Casey
Public Consultation:	Notification to affected residents
Potential Interruptions:	Minimal traffic management may be required. Minor impact to residents due to access to properties.
